

## **ROUND BOAT**

### **ABSTRACT OF THE DISCLOSURE**

The present invention provides for a boat having a circular hull. The circular hull has a topside,  
5 a forward portion and an aft portion. Further, the circular hull has a first slot located in the  
forward portion and a second slot located in the aft portion. A rudder is connected to the circular  
hull within the aft portion. A motor having a motor shaft is connected to the circular hull within  
the slot located in its forward portion. The boat also can have one or more interior compartments  
to house batteries and other storage. A pedestal seat is secured to the topside of the circular hull.
